

Suzie Nawikas earned two Bachelors degrees in Geology and Journalism from the University of Wisconsin Eau Claire in 2004. She joined H&P Mobile Geochemistry (Carlsbad CA) in 2005 working as the lead Project Manager for 10+ years, and is now serving as the Operations Manager for the company. H&P is the nation's largest soil gas sampling and on-site analysis firm in the country, and the first and only organization to hold certifications for active soil gas sampling and proprietary soil gas analytical methods.

During her career with H&P, Mrs. Nawikas has managed over 7,500 soil gas projects, with approximately 100,000 total soil gas samples analyzed. An integral part of her duties is constant communication with clients regarding their specific projects and needs, both during project scoping and during the field sampling event. This has helped her gain practical and hands-on knowledge about the actual field sampling and various solutions that help to resolve common complications in the field.

Mrs. Nawikas has lectured around the country on soil gas collection methods, soil gas analytical methods, indoor air collection methods, indoor air analytical methods, and indoor air background sources. She also is well versed on the most current federal and state vapor intrusion and soil gas regulations nationwide.
